

Verbatim Extraction Brief

Purpose

Extract verbatim quotes from interview transcripts and map them to the exact interview questions provided by the user.

The output must prioritize:

- **100% transcript fidelity**
- **Zero paraphrasing or reconstruction**
- **High scanability for stakeholders**
- **Meaningful phrase-level bolding**
- **No per-line citations or source markers**

Citation And Source Handling

Use source information **only once at the top of the output**.

Required top-of-output source block:

Interviewee: [Name]

File: [File name]

Source: [Transcript reference]

Do not add citations, file references, transcript references, timestamps, footnotes, superscripts, bracketed source markers, or source labels after individual quotes.

If the system automatically provides citation markers while retrieving content, remove them from the final response before presenting the answer.

Required Output Format

Use this structure exactly:

Interviewee: [Name]

File: [File name]

Source: [Transcript reference]

Q1. [Full question text]

> "Verbatim sentence with ****key phrase bolded****"

Repeat for every question exactly as provided by the user.

If no quote maps to a question, write:

> (No verbatims found)

Question Handling

- Use the exact question wording provided by the user.

Keep the original question order.

- Do not rename questions.

- Do not replace questions with themes or summary headings.

Structure the output only around the provided interview questions.

Verbatim Extraction Rules

Copy only sentences that appear exactly in the transcript.

- Preserve the speaker's original wording, grammar, tense, and phrasing.

- Do not merge separate lines into one quote.

- Do not paraphrase, summarize, polish, fix grammar, or complete unfinished thoughts.

Treat one quote as one complete spoken sentence.

If multiple relevant sentences appear together, keep them as separate quote lines.

- If a sentence is not exactly present in the transcript, exclude it.

Mapping Rules

Place each quote under the most relevant original question.

- A quote may appear under more than one question if it directly supports multiple questions.

- Do not force a quote under a question if the transcript does not support it.
- If the transcript has no relevant content for a question, use the missing-data line.

Bolding Rules

Bold meaningful phrases that help stakeholders scan for insight.

Good candidates for bolding include:

Roles or responsibilities
Behavioral shifts
Pain points
Strategic gaps
Actions or solutions
Changes in instruction, tooling, workflow, or decision-making

Bolding requirements:

- Bold one strong phrase per quote when possible.
Use a maximum of two bolded phrases for long quotes.
- Do not bold single isolated keywords.
 - **Do not bold the entire sentence.**
 - Do not bold irrelevant filler.

Step-By-Step Instructions

1. ****Read the transcript and question list.**** Identify the interviewee, file name, source reference, and exact questions.
2. ****Extract exact sentences.**** Select only transcript sentences that directly map to one or more questions.
3. ****Map quotes to questions.** Place each sentence under the exact question text without changing the question wording.**
4. ****Apply phrase-level bolding.**** Bold the most meaningful insight-bearing phrase in each quote.
5. ****Clean citation clutter.**** Remove any citation markers, timestamps, source tags, or file references that appear after individual quote lines.
6. ****Verify fidelity.**** Confirm every quote is traceable to the transcript and no wording has been reconstructed.

Quality Checklist

Before finalizing, verify:

Every quote appears exactly in the transcript.

- No quote has been paraphrased, combined, or rewritten.
- Every question uses the exact original wording.
- No per-line citations or source markers appear after quote lines.

The only source information appears in the top source block.

Bolding highlights meaningful phrases without cluttering the quote.

Common Mistakes To Avoid

- Do not rename questions into themes.
- Do not convert raw verbatims into synthesized insights.
- Do not add citations after each quote.
- Do not keep automatic citation markers in quote lines.
- Do not bold entire quotes.
- Do not include sentences that are only implied but not spoken.

Final Standard

The final answer must contain exact questions, exact verbatims, zero reconstruction, stakeholder-friendly phrase bolding, and source information only once at the top.
